1. Open Friend invites

Companion 1.6.0 or later | Updated October 3, 2026

The inviter earns 10 XP when an invited friend completes **30 qualifying minutes** of Companion use. The minutes can build up across several sessions.

Season 1 requires Companion **1.6.0 or later** to earn seasonal XP. It ends November 3, 2026 at **1 PM Pacific Standard Time** (21:00 UTC). Qualifying use must finish before that time.

Example screen with sample data.

Sign in with your own Epic account and complete **Approve this PC** if the Companion is not linked yet.

Open **Menu > Settings > Friend invites**. Read the eligibility notice, then choose **Participate in referrals and count my eligible Companion use**.

Participation is optional. You can turn it off at any time. Linking your PC and claiming a friend's invite code are separate steps.

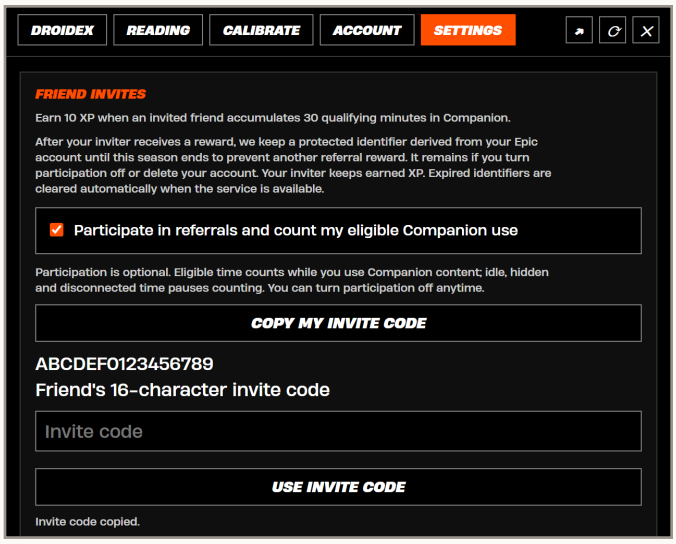

If Friend invites is unavailable, check your installed version, account link and connection. A paused referral campaign cannot count use.

2. Share or claim an invite code

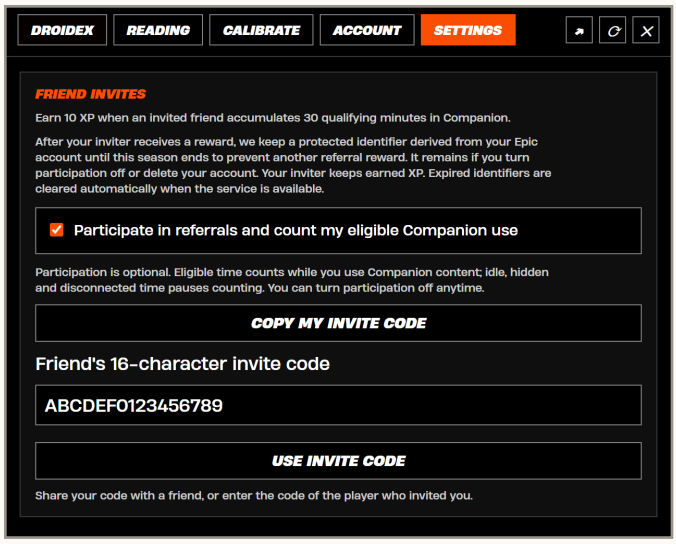

Companion 1.6.0 or later | Updated October 3, 2026

Inviter: choose **Copy my invite code** and send the 16-character code to your friend.

Invited friend: use your own linked account, choose referral participation, enter the code under **Friend's 16-character invite code**, then select **Use invite code**.

Example screen with sample data.

Example screen with sample data.

Share the code manually. There is no website code-entry page or public referral link. Once an invite is recorded, it cannot be switched to another inviter. You cannot claim your own code.

The code shown here is an example. Use the code copied from the inviter's Companion.

3. Build up qualifying use

Companion 1.6.0 or later | Updated October 3, 2026

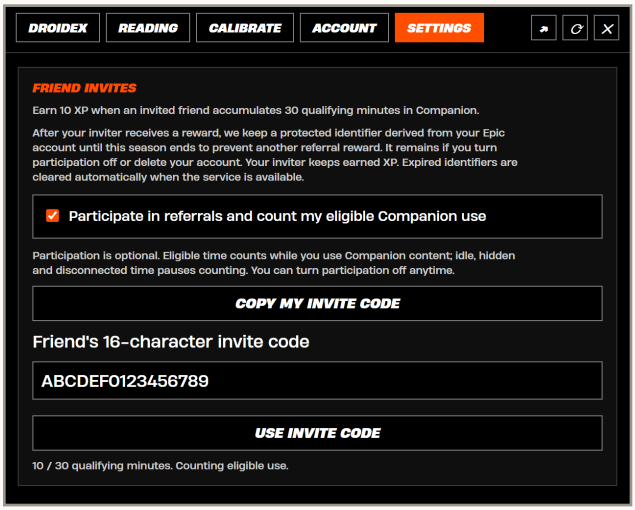

After claiming the code, close Settings and use the Companion's actual content. The status shows saved progress, such as **10 / 30 qualifying minutes**. Time spent in Settings or the referral controls does not count.

Keep the Companion visible and connected while using its content naturally. Useful content must be on screen and actively rendering. Recent interaction with that content is required.

Counting pauses after more than **120 seconds** without a qualifying interaction. A real content action or scroll can qualify. Moving the mouse alone does not.

Hidden or minimized windows, idle time, disconnections, sleep and missing fresh visibility or rendering signals pause counting. Interactions inside the embedded website do not qualify.

Saved qualifying time carries across sessions. Taking a break is fine. You do not need 30 uninterrupted minutes.

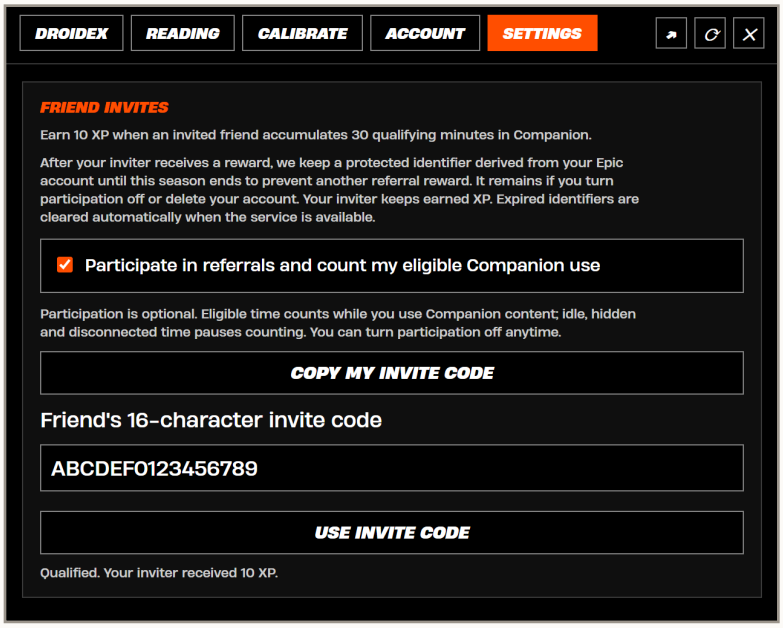

Example screen with sample data.

Ad activity earns no referral time. You never need to click an ad. Ad impressions, clicks and fill do not affect qualification. Simply installing the app or leaving it open is insufficient.

4. Confirm the reward

Companion 1.6.0 or later | Updated October 3, 2026

When qualification is recorded, the invited friend sees **Qualified. Your inviter received 10 XP.** The XP goes to the inviter.

Example screen with sample data.

Each qualifying invited account earns its inviter **one 10-XP reward per season**. Repeating a request or reopening the app does not earn another reward.

A pending-confirmation message means the app is waiting for confirmation. Check the inviter's Season hub receipt before treating the reward as awarded.

An account that has already qualified can still share its own invite code and invite other friends.

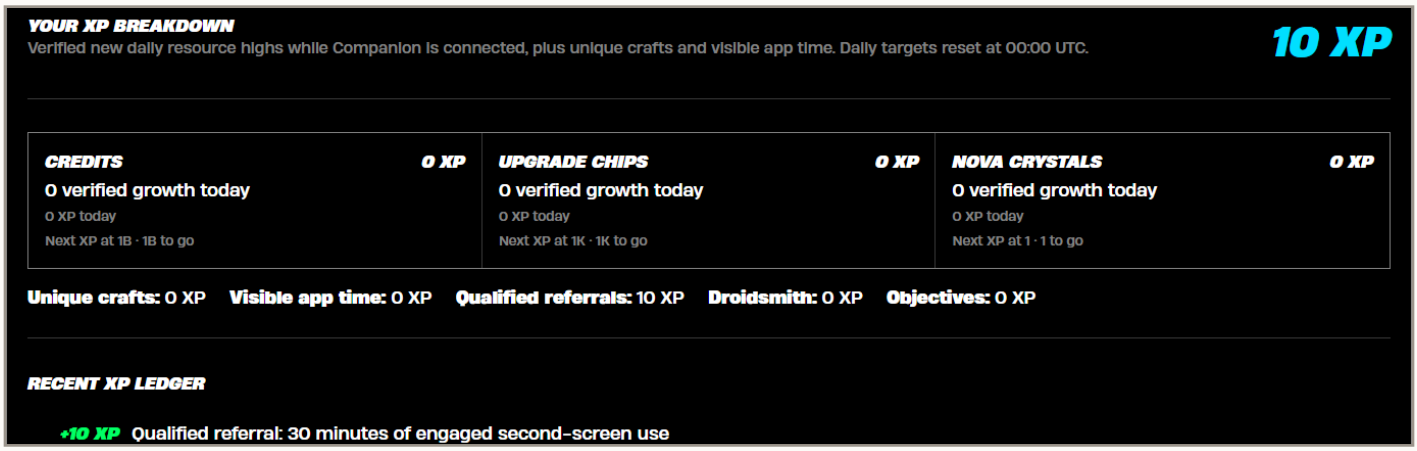

The referral reward is separate from craft, resource-growth and visible-app-time XP. It does not replace those Season 1 earning rules.

5. Check the Season hub receipt

Companion 1.6.0 or later | Updated October 3, 2026

On the website, open **Season hub > Your XP breakdown**. One successful referral adds **10 XP** under **Qualified referrals**. This category totals all qualified referral XP for the season.

The recent XP ledger shows a **+10 XP** receipt labeled **Qualified referral: 30 minutes of engaged second-screen use**.

Example screen with sample data.

Sign in to the account that shared the code to check the award. The invited player's progress appears in the Companion's Friend invites status.

The example above shows one referral. It is sample data, not a real player's award. The current interface does not include an outgoing-invite progress dashboard.

Privacy: use the website's Privacy Policy link before opting in.

6. Participation and privacy

Companion 1.6.0 or later | Updated October 3, 2026

One qualification per Epic account per season. Deleting your Droidex account, clearing the installation or relinking the same Epic account does not allow another referral qualification in Season 1. You can still invite other friends.

A minimal eligibility record remains after a reward. Droidex retains a protected identifier derived from the Epic account, the season and its expiry. The record contains no name, contact details, device ID, Droidex account ID or inviter ID. It can recognize the same Epic account if you return, so it is pseudonymous personal data.

Turning participation off stops new referral-use collection. Account deletion erases ordinary account-linked records. The earned-award eligibility record remains until the published season end, and your inviter keeps XP already earned.

Season 1 eligibility expires November 3, 2026 at 1 PM PST (21:00 UTC), exclusively. Expired records are cleared automatically, normally within a minute plus batch processing when the service is healthy. Outages or cleanup errors can delay physical removal until a successful startup or cleanup run. Existing backup retention also applies.

A later season uses a different protected identifier and can allow a new qualification. The record does not establish that different Epic accounts belong to different people.

Read the full website Privacy Policy and Season 1 rules before participating. This guide uses example screens to explain the flow. Campaign availability and actual awards are shown by the live Companion and Season hub.

DubTrackr is the sole sponsor of Season 1. Overwolf does not sponsor or administer Season 1 and is not responsible for its rules or rewards.
